

Apple Watch Sizing Comparison

For those of you curious on the sizing of the new Apple Watches you can print and cut them out, making sure to print the page at 100% or normal size. The width and depth are approximations based on press images and videos given the known height values Apple has stated for the two models.

Interesting to note, the original iPhone was 11.6mm thick, which is pretty close to the above when you add in the ~1mm for the heartrate monitor protrusion. For comparison, thickness of subsequent models were: iPhone 3G and 3GS 12.3mm, iPhone 4 and 4S 9.3mm, iPhone 5 and 5S 7.6mm, iPhone 6 6.9mm, iPhone 6 Plus 7.1mm (Source: Wikipedia and Apple.com)

Update 2/18/2015: This has been linked to by a number of popular blogs and is being downloaded many thousands of times per day. If everyone is printing it out as intended, what started out as a small personal project is now using up a very substantial amount of paper.

Please recycle your scrap paper and if you enjoyed this I also strongly encourage you to donate even just \$1 to the Arbor Day Foundation. Every single dollar donated to their "Replant Our Nations Forests" program plants a tree. The Arbor Day Foundation is the largest nonprofit organization dedicated to planting trees. Donate now at <http://bit.ly/plantatreefordollar>
